

This technical drawing shows a mechanical assembly with a central component and two side panels. The central component is a rectangular block with a circular feature in the center, surrounded by a dashed line. It is flanked by two side panels, each containing a grid of small circles. The entire assembly is enclosed in a rectangular frame with rounded corners. The drawing uses solid lines for the main components and dashed lines for hidden or internal features. A central vertical dashed line indicates a plane of symmetry.
